

AGA Corporate Partner [Technology](#) Committee

Tech Thursday Presentation July 1, 2021

8:30 a.m. – 9:00 a.m. Eastern

Making the Right Decisions the First Time ***Transforming Your Financial Business Systems***

Fill up your coffee cup and join Don Bennett as he discusses his journey at NGA: **Making the Right Decisions the First Time | *Transforming Your Financial Business Systems***. Twenty-minute presentation followed by ten-minutes of Q&A.

When executed and leveraged properly, technology can ensure a sense of security. Like the Intelligence Community whose mission is to provide information to our leaders to safeguard our Nation's security, government agencies and public/private/nonprofit organizations are responsible for providing a level of data that will support leaders with decision-making. Using integrated technology, an organization can make data transformative.

NGA, the intelligence agency charged with collecting and analyzing geospatial (terrestrial and near-Earth celestial) mapping information for the Defense Department, utilizes financial management technology to assist with the agency's accounting and budgeting. In 2016, NGA, in conjunction with its sister agency the National Reconnaissance Office, launched a new budget planning and financial requirements planning and reporting tool entitled ORBIT. This tool unites its core accounting data sets together with its budget formulation and execution data to transform financial and budget reporting by vastly reducing the time to deliver information to agency decision makers.

Don Bennett, who serves as the Chief of Financial Business Systems at NGA, will walk us through the many challenges NGA had to overcome to prepare and integrate this data using technology platforms common within civilian agencies.
